

SCHOTT MAGIRA® RestrictView

The new MAGIRA® RestrictView from SCHOTT allows people to see through it in cases where this is desired or just the opposite.

MAGIRA® RestrictView is a laminated glass that comes in a variety of different thicknesses and sizes. The laminate consists of two panes of SCHOTT AMIRAN® that are laminated together with the help of a PE film.

Depending on the direction that the embedded film is installed in, you can either see through these two panes or not.

Applications

- Hospitals
- Schools
- Prisons
- Private homes
- Offices
- Conference rooms

How it works

If the glasses are installed in such a manner that the films in between face in the same direction, you will be able to see through the two panes...

... but if, on the other hand, one of the panes is turned by 90°, then it will no longer be possible to see through the panes.

Technical Data

Maximum dimensions:
approx. 1200 mm x 1200 mm

- Structure:**
- SCHOTT AMIRAN®
(4, 5, 6, 8 or 10 mm)
 - PE film 1.28 mm
 - SCHOTT AMIRAN®
(4, 5, 6, 8 or 10 mm)
